Triton College
General Education
Course Objectives

1) Develop and demonstrate critical thinking and problem resolution skills.

2) Develop and apply skills in verbal and non-verbal communication (i.e. writing, music, art, etc.), organization competence, confidence and factual support.

3) Develop and apply mathematical concepts for computation, reasoning, and problem solving.

4) Recognize basic principles of physical and life sciences, and their applications that contribute to physical, psychological, and spiritual being.

5) Identify the impact and advantages to society provided by technology, and cultivate technological skills to obtain information.

6) Study and gain a cross-disciplinary understanding in disciplines that enable one to better understand and successfully interact with the various aspects (political, social, multilingual, interpersonal, artistic, and cultural) of the world in which one lives.

7) Value diversity with respect to race, ethnic origin, gender, lifestyle, religion, and other human differences with a focus on improving relations and contributing to a global community.
